EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Frank Linguiti on March 23, 2004.

The application has been amended as follows:

In the claims:

In claim 21, line 11, "role" has been changed to --roll--.

In claim 21, line 13, "role" has been changed to --roll--.

In claim 21, line 14, "role" has been changed to --roll--.

In claim 29, line 16, "role" has been changed to --roll--.

2. The following is an examiner's statement of reasons for allowance: None of the prior art of record taught or suggested the claimed use of vacuum through openings in the ends of the roll core base which extended to the resin infusion channel wherein resin was applied to the openings at the ends in order to infuse the resin into the densely packed fibers over substantially the entire length of the roll core base (and from the ends to the center of the roll core base as defined in claims 28 and 29). While the use of vacuum for impregnation of a dry fiber layer was known per se in the art of forming fiber reinforced composites as suggested by any one of Paul, Jr. (who is impregnating a dry wound layer on a mandrel in the manufacture of a composite vessel), Brookstein (who suggested the use of vacuum impregnation) and Pearce, newly cited, (who is

manufacturing a fiber reinforced shaft for a recreational article where dry fibers are wound on a mandrel and impregnated with resin under vacuum), none of the prior art of record suggested the formation of the specified roll assembly wherein the densely disposed fibers on the core were infused with resin from openings at the ends of the roll after the dry fibers were covered with a covering layer. The reference to Paasonen et al suggested the infusion of resin into a spacer fabric on a core for a roll assembly, however the spacer is not densely packed fiber and the resin was injected into the spacer under pressure (as opposed to the use of vacuum to infuse the fibers).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeff H. Aftergut whose telephone number is 571-272-1212. The examiner can normally be reached on Monday-Friday 7:15-345 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Crispino can be reached on 571-272-1226. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
